Portus第三方对接文档

获取支付需要的参数信息

```
url: /user/getShareInfo
params: {
    referCode: string;
    userId: string | number
}

response: {
    success: bool,
    data: {
        tokenId: number,            // KOL 对应的tokenId
        chainId: number,            // 在哪条链上支付
        contractAddress: string     // 支付时需要调用的合约地址
    }
}
```

支付合约调用

```
合约地址：接口/user/getShareInfo 返回的contractAddress
// erc20Address：指ERC20合约地址，例如USDT合约地址
// amount：支付金额
// referralToken： 上面接口返回的tokenId
合约方法：charge(erc20Address,amount,referralToken)
```

ABI文件:

```json
